Data Source: Centers for Disease Control and Prevention, National Center for Health Statistics. Underlying Cause of Death 1999-2009 on CDC WONDER Online Database, released 2012.

Coronary heart disease deaths are defined as deaths in which the underlying cause of death was coded as I20-I25.

Crude rates are deaths per 100,000 population.

Age-adjusted rates are deaths per 100,000 population age-adjusted to the U.S. 2000 standard population.

95% CI: 95% confidence interval of the rate.

DNR: Data not reliable. Rates are flagged as unreliable when the rate is calculated with a numerator of 20 or less.

**Deaths of persons with Hispanic origin or Race "Not Stated" are included in "Total" counts and rates, but are not distributed among Hispanic Origin/Race groups, so are not included in the Hispanic Origin/Race specific counts and rates.
